

GROUP 3: ASSETS WORTH MORE THAN \$2,200

Workshop 3: Our Choices

Carl

My name is Carl and I live in Haiti’s capital city, Port-Au-Prince. Worldwide young people aged 15-24 are more likely to contract HIV/AIDS. I am part of an initiative called MAP-PAP which aims to show young people the physical elements of the environment that put them at increased risk of contracting HIV/AIDS.

I was trained how to use a smartphone to map dangerous areas in my neighbourhood such as empty houses and isolated corridors.

[See Carl’s video here](#)

“The local authority published the findings which will help young people to better protect themselves.”

Haiti?

How is mobile technology improving the lives of people worldwide?

Young people are always coming up with great solutions to the world’s problems. Why are these contributions so important?

How has the local authority helped in the success of MAP-PAP?
